Alt 3: Microwave Harassment and Mind Control Experimentation

(Host Greg Syzmanski)

Chris, also I have a guest who has never given a Radio Interview before her name is Julianne McKinney. For those of you who don't know who she is, she is an Expert in Electronic Harassment and Surveillance former military background and those of you who follow this story on my show will, many may know who she is and the importance she has in this field which is going to lay some very solid credibility to what we been talking about so this interview is quite important and you to remember that as we go along. She is a very, very well read person. We are going to get to that in a minute. The problem of the use of electronic weaponry on a person when I was working in a law office in the law office I worked for, this was several, a number of years ago. The law office prided in taking difficult cases that were difficult and had I listened to a person tell me about the facts regarding the use of electronic weaponry and I had discussion with somebody in the law firm and we came to this collusion, "Causation, Causation, Causation, Causation Element," Gregory, remember that element it is gonna be awfully difficult to link what's happening to the person, the injuries they are alleging to actually the person or the defendants that were doing it. So it's a case I'll be very honest, I was very skeptical over, but as a journalist I started to interview a number of people and I would like to say that issue after a number of years is come up to one of the top of my list as problem in our country. I've talked to hundreds of people around the country who are experiencing things that are just unbelievable and from a stand point of the law; you want to get justice for these people. You hate to see their lives destroyed, you hate to see what happens to a person that has been harassed. The biggest problem is that it is very difficult to pin point what is going on. I have a guest today who is an expert in this field. You probably may not know who she is but those of you who have been targeted and listen to my show know her well. She never interviewed before and I feel honored that she is here. Her name is Julianne McKinney, she is had an extensive in career in U.S. Army as an Area Intelligence Case Officer till 1990. Upon her return to civilian life Julianne became a member of the Association of the National Security Alumni. That is an organization of former Intelligence Officers dedicated to exposing the excesses by the U.S. Intelligence Services. Julianne became the Director of the Electronics Surveillance Project under the auspices and such she offer the publication, "Microwave Harassment and Mind Control Experimentation," in 1991. She kept that Electronics Surveillance Project going for four (4) years by funding it with her own personal funds obtained through her military benefits medi-pay. Julianne did not copyright her work and it is out in the public domain for the public good. Microwave Harassment and Mind Control Experimentation, the public has taken her hard copy publication and uploaded it to several thousand domain sites over the past 15 (Fifteen) years it is still respected as one of the most important publications on this subject and with that I'd like to say, "Hello Ms. McKinney, how are you today?"

(Guest Julianne McKinney)

Please don't call me Ms. McKinney.

(Host Greg Syzmanski)

Okay, can I say Julianne?

(Guest Julianne McKinney)

Yes, Julianne...

(Host Greg Syzmanski)

Now you're an expert in surveillance and electronic harassment and the first question I have is, "It your observation that there is a wider scale of surveillance of average people, people with no threat to The National Security in your estimation?"

(Guest Julianne McKinney)

I would say that most of those targeted are not, never have been, a threat. I think that what has happened initially these operations began probably 30 (Thirty) years ago people were single out perhaps because of some affiliation either direct or indirect with the United States Government and invited attention, but they were not being threats, they were single out as being lucrative targets of experimentation. In the past 15 (Fifteen) years in shutting down the Electronic Surveillance Project primarily to seek employment and I did obtain it. I had occasion to observe many, many instances of individual in the corporate environment being singled out simply because they were convenient targets of opportunity and I have to comment on something I heard you said early on, you referred to the difficulty of establishing "Causation" in order to pursue the claim.

(Host Greg Szymanski)

And I might add that was made in a legal sense based on the facts that we were naïve people not really understanding. I'll be honest with you; I've not understood the problem back then and felt it would be a difficult problem just based on the fact on knowing how the crime is committed and pin that crime on someone. Go ahead...

(Host Greg Szymanski)

I understand the legal implications certainly; there is enough literature on the Internet and elsewhere that establishes the existence of these weapons systems. To pin point for purpose of prosecution, to pin point their existence would be difficult. The position that I take is rather than pin point them for prosecution purposes easy enough to single them out by electronic means and to destroy them, but I guess that is taking the matter a far afield. I think frankly that we still face until Congress establishes laws that forbids the use of this technologies or this involuntary experimental purposes. We will get absolutely no where in attempting to prosecute within this system.

(Host Greg Szymanski)

Okay, listen I need to take a break Julianne and we'll be back in (3) three minutes on the "Investigative Journal."

(Guest Julianne McKinney)

Okay.

(0:06:13.6) (Host Greg Szymanski)

Okay back to the second half hour. My guest is Julianne McKinney she is an expert on Surveillance and Electronic Harassment and Julianne I gave you an introduction at the beginning of the show, a brief introduction but I think our listeners would like to know your background and why you are qualified to make these statements. I think this is important, if you can do that for us.

(Guest Julianne McKinney)

Okay, Well I will take except to the term as "Expert" in these weapon systems.

(Host Greg Szymanski)

Okay.

(Guest Julianne McKinney)

I certainly had experience with them having for approximately the past forty (40) years been on the receiving end of this type of harassment.

(Host Greg Szymanski)

Okay.

(Guest Julianne McKinney)

Expertise in comes with my employment in the Intelligence field. I understanding what constitutes "Surveillance," I'm capable of immediately "Spotting a Surveillance," and I can see as in the case of "Gangstalking" a subject which you have address on prior occasions, I can see those who I label as "Covert Wantables" bumbling and stumbling through what they think are covert activities and find it really rather amusing if it were not so perverted in the ultimate objective. I'm not certain what more I can add; I do have experience with these weapon systems. I have sufficient opportunities over the past many years to observe the progressive spread of these harassment operations and I'm talking specifically about electronic weapon systems.

(0:07:50.5) (Host Greg Szymanski)

Well you've been a voice; I mean a strong voice of warning people of these systems in at least this past ten (10) years regarding the installation of specialized electronic equipment and utilities. What are these electronics and what are their capabilities?

(Guest Julianne McKinney)

Their capability, generally are to inflict pain in a highly focused fashion and to alter mental states when you have the frequency aimed at your brain, your mental function tend to alter. In amplified form their sufficient the the frequencies

have the capacity to kill that's why, that is one reason why the Department of Defense (DOD) refers to them as "Less than Lethal" instead of "Non-Lethal" Weapons. As the matter fact the Department of Defense has gone so far as to eliminate them to removed them from the category of even less than lethal weapons and bury them under the category of "Electronics Weapons" to make them a little bit blacker.

(Host Greg Syzmanski)

Now is this protocol surveillance and harassment smilingly patterned after government protocol now applied to the general civilian population?

(Host Greg Syzmanski)

It is difficult to pin point everything on this stage on the U.S. Government exclusively because these are global operations.

(Host Greg Syzmanski)

Okay.

(Guest Julianne McKinney)

The pattern, the protocols are virtually identical on a global scale. So someone is overseeing the entire activity. The Governments is obviously complicit because otherwise these operations would not be allowed to exist. Why, it is hard to say. Whether it is for testing electronics for future use under combat conditions or ultimately there is a Holocaust [Unintelligible] it is hard to say.

(Host Greg Syzmanski)

You know what I find interesting how people that are not aware of these problems can't believe that it's happening to begin with. I had to run stories about the Duplessis Orphans it's a program has been verified that the government that actually used money in Canada and in the United States to use, to do medical testing on children, on adults. I've talked to people on the POW issue Dr. Joe Douglas who has documented how our government has done allowed foreign governments to do illegal experimentation on POW's.

(Guest Julianne McKinney)

Yes ...

(Host Greg Syzmanski)

So why would people think they wouldn't allow it on just average citizens? Is it just in your mind, do you have an answer for people and what do you think about it?

(Guest Julianne McKinney)

Why wouldn't they allow it?

[1:10pm (0:10:14.0)]

(Host Greg Syzmanski)

Yeah, I mean my think is they're doing it but some people that are denying it can't believe that our government would do something like this.

(Guest Julianne McKinney)

You'll find even among the community of the, I hate using slang terms, but term TI referring to "Targeted Individuals" those are people who fully realize they are on the receiving end of electronic weapons, even among TI's there's the perception in certain areas that our government would not do this. A case of not recognizing reality, first of all if this were not being done by our government Congress would step in because of the hundreds of complaints they have received, thousands of complaints no doubt over the past ten (10) – fifteen (15) years from citizens who recognize what is going on. Congress back in the early nineties (90's), late eighties (80's) took a position that anyone complaining about these systems were imagining things because they simply didn't exist within two (2) years, by 1992 (One Thousand, Nine Hundred and Ninety-Two) they were off the drawing boards in fact being fielded concealed and conveyed to Law Enforcement Agencies. Congress recognizes these weapons systems exists and funds them and knows as result of appropriate briefs of the effects, the bioeffects can be yet they have had no legislation prohibiting their use on under unconstrained experimental circumstances. Two, given the nature, these systems draw on existing power grids it would be necessary, the FCC at the minimum and The Department of Energy at the minimum to have some oversight or control over what is going. So obviously those with Congress, the FTA and the Department of Energy, The FCC, the Department of Energy are knowledgeable and yet unwilling to do anything about. So there is complicity, the question at whose bidding at government allowing it these operations to take place?

(Host Greg Syzmanski)

Now from your experience how intense is this surveillance of targeted individuals and tell us about the ways the targeted are accomplished?

(Guest Julianne McKinney)

From what I have observed, first of all should explain the standard as I address this in this Microwave Harassment and Mind Control Experimentation there's a pattern it was unfolding when I was doing these other Targeted Individuals that have contacted me. There is a pattern of harassment that is indicated. There has been some surveillance going on, some monitoring going on of their private lives. There has been entry into their houses. There has been systematic harassment, it is a softening up process and ultimately electronic harassment would follow which would include inducement of auditory input which is being referred to as "V2K." In answer to your question, I'm not certain if I, I think I'm missing the point there but in order to target someone it requires that person under surveillance, of the personality traits, their capacity to interrelate to with people. Their capacity for corruption or noncorruption, that seems to be a critical point and even their religion factors into it. Following a period of harassment they are singled out for preliminary stages of harassment which would include gangstalking, entry of their private homes and apartments. Followed by gradually intensified and ultimately extremely intensified electronic harassment, this is a pattern that has unfolded over and over.

(0:15:11.8) (Host Greg Syzmanski)

And so, when you I guess what I'm getting at that's a very good answer "You're seeing a pattern amongst these individuals." Is there any pattern about how they choose them?

(Guest Julianne McKinney)

I can't speak for men; it seems that great quite a few of the women that are single out appear somewhat too independent. Perhaps too intelligent, tends to live alone or tends to pursue professional careers. There is a heavy predominance of those types of women in the TI Community, Community of Targeted Individuals. Men are in a smaller proportion and seem to be those who have a propensity to fly off the handle, have a sense of self esteem and pride that seems to invite targeting and I did mention also a period predominance of a certain lack of religion amongst TIs as appose to a certain predominance of a particular religion amongst who participating in these operations.

(Host Greg Syzmanski)

Now, you mentioned that this was a global problem and you communicated with people from across the Atlantic regarding what's going on in other countries because it is similar to here.

(Guest Julianne McKinney)

It is virtually identical, it is virtually identical. When I was running the "Electronic Surveillance Project," I was extensive correspondence with people overseas and the patterns were the same, the nature of the gangstalking was the same and the harassment, were the same.

(Host Greg Syzmanski)

Now, when you are talking about specific number I know you're, you've been following this for years, and years and years, is there any way you can give our listeners a kind of an idea of how wide spread this problem is in terms of numbers in our country and compare it to overseas.

(Guest Julianne McKinney)

I would I say that the person who have realized what's going are just drop in the bucket. The person who might seen being targeted are completely unaware of what is happening. Those who of this complaining are, they said, "It is the tip of the ice berg." I can't under the circumstances come up with any figures, many, many, many thousands no doubt are involved, but I would say that the bulk of those are running to their doctors and taking totally unnecessary prescription drugs to cure ailments that in fact don't exist.

(0:18:06.4) (Host Greg Syzmanski)

I guess that you have to ask even though it is very difficult to answer and you mentioned you said it earlier, but I really have to ask it because it's on my mind and I know always in the back of everyone's mind when they think of this problem,

(Guest Julianne McKinney)

I'll try.

(Host Greg Syzmanski)

"Why? What is the major reason, outside the pure experimentation?" Now I'm interested for example, "let's say they experimented on hundred (100) people in Oklahoma?" What are they, first of all, why are they doing it? Is it for basic blanket controlling the population and what do they do with this information once they get it?

(Guest Julianne McKinney)

I don't think do anything with the information once they get it except establish a "Harassment Protocol" which will follow that targeted individual for the rest of his or her life. Why are they doing it? I see a number of reasons. First, I

don't know if you've done any research on the phenomenon of capturing a percentage of the population in order to install a dictatorship. There always a percentage of the population, roughly 20% (Twenty) or so that will buckle and throw whatever constitutions might exist and to toil at hand eagerly join the effort at destroying the remainder of the population. Part of the problem or part of the objectives that they are seeking obviously is testing the latest and the greatest in electronic weaponry and other forms of technologies. Apart of it to control and choreograph those who are involved in the harassment operations in the defending [sic] end and it would appear that those being targeted are simply off chance of who I see as ultimately being disposable. In other words, I think that once full control is established over a major percentage of the population and enough of the population is silenced and willing to stick their necks out that we inevitably will be heading towards a Holocaust.

(0:20:31.0) (Host Greg Syzmanski)

The question, If I was for example, let's say we have a person who suspects, let's just say for hypothetical purposes say that this person is being targeted, okay. Now, tell our listeners, cause I'm wanted to know if this would sell, okay, I'm sitting in my house and I see around me telephone poles, there may be a tower in the distance, I don't see the handles, the cell phones, there's of course a grid of electric going on around me. I've talked to people and I've tried to say, "How does this get into your house and I wanted to get your opinion, if a person is targeted how basically are they beginning to intrude their premises and violate their constitutional rights, not only their rights, not only trespassing." Go ahead .. How would that happen?

(0:21:25.1) (Guest Julianne McKinney)

Are you talking about how would the frequencies impact upon them and how would they first become aware of it, or how when would they first become aware of how their privacy had been violated?

(Host Greg Syzmanski)

Well no, I guess I didn't explain the question right. I guess I wanted to know how are they physically doing it, I mean are they using, are they using a cell tower, are they using a truck that's in the distance. How is this being transmitted into the home to target the person and to use this weaponry on them from your experience?

(0:21:54.2) (Guest Julianne McKinney)

Well, first of all in order to target a person, you have to be able to see that person and while they may not be able to, they may on entering the house planted miniature cameras, miniature microphones as a means of, for the monitoring but that is not necessarily the means by which they hone in on a person. There are plenty of technologies that allow for the imaging of a person who might be sitting in a chair as you've mentioned, you might be using infrared imaging techniques for example of they can capture your image by monitoring the concentration of heat emanating from your body from certain acoustical frequencies, they can detect mass and using sophisticated computer software, they can convert those images to likenesses on computers which conceivable could be used in a software program that would be connect to a electronic weapon system and in that context I should point out that devices, while devices draw on the existing power grid while yes indeed they do involve microwave towers. It sounds like you've got a commercial coming on?

(Host Greg Syzmanski)

Yeah we do and thank you for making my job easier. We'll be back in three (3) minutes here on the "Investigative Journal."

(Host Greg Syzmanski)

I've put this in the top three (3) of my stories that I believe are important that the American people need to deal with because as Ms. McKinney who is, I consider her an expert, she would only say that she is an authority but let me tell you Julianne you are an expert in this. The reasons could be, like she said before we went into the break, "Total testing of our population to see basically, perhaps there is a Holocaust in the future or a dictatorship in the future and they want to see how people will react to that. That may be a simplistic way of looking at it, but it not a simplistic way of Julianne looking at it, but my way of explaining it. But let's get back to some of the last few minutes that are important. What can you tell us about the use of microwave energy used on citizens in terms of existence of such a program and the nuts and bolts of what they do?

(0:24:29.6) (Guest Julianne McKinney)

Microwave energy is only one aspect of the entire electromagnetic frequency spectrum. Microwaves can be lethal depending upon how they are used obviously in order to achieve appropriate effects on people, they have to be pulsed because of otherwise the individual would be cooked from the inside out. The objective of using the microwaves as opposed to using other electromagnetic frequencies would be to inflict extremes pain, to cause thermal heating. That is

a common complaint that leaves a hot spot on the skull, but again primarily to inflict extremes of pain. I was just wondering, we kind of skipped over or didn't quite complete a proceeding topic.

(Host Greg Syzmanski)

Oh, go ahead, go ahead.

(Host Greg Syzmanski)

And that was, we were talking about use of the electrical grid throughout the country. The use of microwave towers, the use of devices to affixed to poles that are connected to power lines, but wasn't addresses to what you haven't mentioned is also is these weapons systems are abused by neighbors surrounding persons who've been single out as targets of opportunity and these people.

(Host Greg Syzmanski)

Are they solicited to do this or what?

(Guest Julianne McKinney)

That's something I've been pondering for quite some time. Again I've noticed there seems predominance of a particular religion that makes it particularly easy for them to cooperate.

(Host Greg Syzmanski)

Well listen, let's talk about that after the break, I got a short break and then I've got something to do, some business I have to take care for three or four minutes then we'll come back for our second hour with Julianne McKinney we'll take some calls back in two (2) minutes with "Investigative Journal" by some of the TIs and that's "Targeted Individuals." Now in that song rose to number one without any publicity on the Internet and that song called "TI" we'll play that song again Julianne McKinney. I think it hits the nail on the head there's a lot of people suffering, I know you're one person an authority in this field and for my guests just picking us up this hour, Dr., excuse me Julianne McKinney is a highly regarded person in the field in the electronic weaponry and surveillance in studying this issue. She is a former area Intelligence Case Officer in 1990 in the Army and her credentials can be found you can rbmlive.com and go to my archives on the "Investigative Journal." She is very well qualified, she's still with us this hour Dr., excuse me I keep a calling you a doctor and you should be.

(Guest Julianne McKinney)

I'm not a doctor.

(Host Greg Syzmanski)

That's okay.

(Guest Julianne McKinney)

Emeritus.

(Host Greg Syzmanski)

Dr. Emeritus, you know that is funny. You know I have a doctorate in Law and nobody calls me that and I hate being called doctor but I am interviewed on Toronto Radio or Television Station once every blue moon or couple months and they refer to me as Dr. Syzmanski and nice to hear once in a while, I'll be honest, e very once, every two months is good enough. Otherwise they call me the jerk on the radio which is better, but let's go from here you're adding such credibility to this story. Adding credibility as I speak because I've talked to hundreds of these people I was a doubting Thomas in the beginning, I must mention that. I did not think that it did not existed and that was years ago. I thought people were either insane or crazy or trying to get attention, but you know something, I will admit I was totally wrong with that initial, with that initial ideas to look at the situation and have come around to fully believe in most of the people I talk to and really sympathize with the people suffering as I seeing their lives being ripped apart. Are there any things you can do, we are going into get into a few more things as far as the technical aspects of this, but what can targeted individuals do to get some peace in their life, cause that is one thing they are looking for? Is there anything they can do?

(0:29:17.2) (Guest Julianne McKinney)

Auuhhh...

(Host Greg Syzmanski)

That's a difficult question?

(Guest Julianne McKinney)

Long prolong silence. It's time for another commercial. It is very difficult to advice targeted individuals on how to acquire peace. These frequencies can be blocked or deflected all of these frequencies; I have found some may contest this but I have found can be are vulnerable and are subject to deflection and the pain can be ameliorated if not halted altogether. Finding peace by writing to members of Congress or to State Legislatures might be the better alternative

because you will be treated as something worthy of the circular basket. They just won't intervene, writing to the various agencies and calling and meeting with them will serve no useful purpose either because they will say there are no laws prohibiting these kinds of types activities they can't, say for example the FBI and I was given the statement on a number of occasions, "There are not laws prohibiting experimentation with these weapons systems. You are talking to the wrong people." So advice my advice would be to do what you can to secure your premises because so long as your house is, or your apartment is being entered you are being susceptible in addition to being targeted by electronic weapons. There is a potential for, having drugs surreptitiously be put into your food and I'm not exaggerating there.

(Host Greg Syzmanski)

I had a have a few targeted individuals that I talked to send me some questions they would like to ask you, the one was, "Are targeted individuals also broadcasted around the country via closed circuit TV and what purpose does this serve?" I am fully in the dark on this question, but go ahead.

(Guest Julianne McKinney)

Okay I have seen evidence of closed circuited TV and it seems to be some form of major source of entertainment and perhaps instruction for the individuals participating in this harassment. I don't know who runs it. I have seen aspects of it on a large screen TV across the street on which I saw surveillance films of a TI being harassed obviously in office environment gang stalked, showing brain scanned otherwise a very sophisticated, sleek communications operation. Why would it be used? As I said, either for entertainment for creating a sense of unity, for identifying persons, TIs who are to be harassed on the street, I mean obviously you can't harass that person if you don't know what that person looks like. So it is a means of communicating to the perpetrators what the TI looks like.

(0:32:42.4.) (Host Greg Syzmanski)

Okay. Now I before I get to some more I want to put out that call for people to call. I got a couple of emails Sometimes TIs don't want to go public and they've sent me some emails and I want to get to one in a minute. But one question I have for you is, "How can people gather evidence to support their beliefs that this is happening to them?" Many people well will say it's only a lack of sleep, you have a sleep disorder. Perhaps there is a problem with your joints; I don't know it could be anything that the answers are, one you suspect that you are being targeted?" What kind of evidence do you to tell people to gather to support their beliefs that this is actually happening to them?

(Guest Julianne McKinney)

Well, when you gather evidence you usually have one objective in mind and that is generally is legal and what do you want to do with that evidence? There is really nothing can do with but so in the absence of that the main thing is to try to protect yourself and alleviate the pain that you are experiencing. Collecting the evidence, if you were to go to, frankly I strongly recommend that you keep your faculties together and avoid going to see psychiatrists and psychologist because the pattern that is evolving is that they are highly complicit in these operations and if you go to a medical doctor, you do not talk about because many are also involved.

(0:34:22.0)(Host Greg Syzmanski)

So basically ..

(Guest Julianne McKinney)

What you do when you see a doctor is define your symptoms and get a very clear statement, "Well, we cannot figure this out," Well, that is a clear indication that if it's not indigenous, it is not part of your system, then if it is not coming within you then it is obviously that it is happening outside. If they prescribe and yet find the etiology, the basis of your disease, don't take those drugs.

(0:34:58.0) (Host Greg Syzmanski)

Earlier were talking about the fact they may, whose ever is doing this, you've delineated, you've lead a good course to what, you know you're tracking these people, but what I was getting at we never got to the point where if you mentioned something about religious group that may be targeted and what did you mean by that.

(0:35:20.6) (Guest Julianne McKinney)

Well, wait I don't, let me to put it this way, I am not anxious to start a religious war. I have found over the years that the persons involved both "Gangstalking" from I've made it a point to get to know these people. I've had to necessarily and I'm not the type.

(Host Greg Syzmanski)

Are you talking about the perpetrators or the targeted?

(Guest Julianne McKinney)

Perpetrators, as well I have been drawing distinctions and what I have found is that the perpetrators appear to belong predominately to one particular religion where as the targeted individuals do belong predominately to that particular religion.

(Host Greg Syzmanski)

And what is that particular religion of the perpetrators?

(Guest Julianne McKinney)

Right, so at this stage, again I'm not particularly enthused about the idea of starting a religious war and I have challenged other TIs to get out there and get to become acquainted with, get to know their people who are harassing them. To make to do draw those distinctions themselves because I'm not going to making brash claims. This is something I have observed over the past ten (10) years.

(Host Greg Syzmanski)

That's fair enough. We maybe perhaps I can talk to you about it for my own knowledge off the air and maybe I'll keep you name out of it at that point and let people know what the targeted group may be and what the other group may be.

(Guest Julianne McKinney)

There is a religious influence but that's not to say that these people are not being used as puppets by some broader interests.

(Host Greg Syzmanski)

A very good point, can you stick with us one more last segment, Five (5) minutes?

(Guest Julianne McKinney)

Okay.

(Host Greg Syzmanski)

Julian McKinney our last segment Julianne is an authority in Surveillance and Electronic Weaponry and this is an email question kind of a technical one from a TI. Let me read this one for you perhaps you can answer it, "Are the protocols for each individual modified based to customer tailored for the specific targeted individual and if so how is this process worked?"

(0:37:29.9) (Guest Julianne McKinney)

Yes indeed they are modified there is a basic protocol that the perpetrators begin with, but the TIs contributes to the modification. How can I think of a good example? I'm trying to think of a good example. If a TI feels a need to cooperate, even in the most subtle fashion with person who are harassing him or her he or she will modify his behavior in a Pavlovian condition which alters the protocol. They are constantly monitored, targets are constantly monitored and if they respond emotionally to a particular trigger that will built into the protocol if the target displays a certain sense of guilt or embarrassment about a subject that will built into the protocol. It is an going process and one thing that I want to emphasize is no TI should look for a reason is to why this is going on, this is a serious, serious mistake. I know this. It's a natural tendency, I did that myself, when they started on me and over the years I came up with probably six (6) different reasons.

(Host Greg Syzmanski)

Is it still going on with you?

(Guest Julianne McKinney)

Oh yes, but not to the degree that it was before, but certainly in lethal form.

(Host Greg Syzmanski)

And how has it hampered your life?

(Host Greg Syzmanski)

It's comes close to lethal on a number of occasions. I deal; I've dealt with gangstalking head on and I essentially put that to rest. I deal with, I've developed means with communicating with perps directly and making them feel like trailer trash that they are. So gangstalking is not one of their favorite activities in my case. The primary activity now is to see what I survive in a way induced brain aneurysm, stroke, or heart attack.

(Host Greg Syzmanski)

A caller that doesn't want to get on the air wants to know, "Does moving help, moving your location?"

(Guest Julianne McKinney)

Running, if you're talking about moving to a complete new, a completely new location? No. This country is wired to the hilt for immediate transfer. Your protocol follows you where ever you go, so it is a waste of time. Moving about physically in place will not change anything, other than if you take a 180 degree turn you will notice that your targeting

will suddenly stop because the weapon system are programmed to focus on a particular area of the atomy if you turn the targeting will suddenly end turn back it will hit you again.

(Host Greg Syzmanski)

Interesting, Going full circle in the last two (2) minutes here, in 1991 you published “Microwave Harassment and Mind Control Experimentation” this has been passed around the Internet and over thousand of domain sites over the past fifteen (15) years. Can you tell us how some can get a hold of this publication to be informed?

(Guest Julianne McKinney)

It’s not copyrighted; anyone can get a hold of it. All you need to do is plug in my last name; “McKinney and type in the title Microwave Harassment and Mind Control Experimentation” and enumerable sites will appear and read just it from there. It gives you some good insight into as to what the pattern is when the harassment begins.

(Host Greg Syzmanski)

Let me spell your name M-c-K-i-n-n-e-y Microwave Harassment and Mind Control Experimentation from the authority in the field. Since 1981 have you seen a question I wanted to ask, from 2001 have you seen from the time of 9/11 has there has been an increase for the last four (4) or five (5) years with this type of you’ve seen has the number of people contacting you the widespread, has it been more wide spread during this time since 9/11?

(Guest Julianne McKinney)

It, when not since 9/11 it’s when I would say back in the early 90’s I’ve seen a tremendous expansion of these activities since the early 1990’s and it has moved forward in consistent fashion becoming ever more sophisticated and a little more widespread. So there is not sudden burst of activity or flurry of activity since 9/11.

(Host Greg Syzmanski)

And you have no help whatsoever with the political arena with this, correct politicians will not touch this? The politicians will not touch this with a ten foot pole?

(Guest Julianne McKinney)

That’s right, and even those who purport are liberally inclined and I’m speaking about the Members of the Democratic Party, will not touch it because quote unquote, they know what’s going on. They simply don’t have the funds to be able to pursue it. All sorts of huma huma excuses will be furnished for not pursuing something like this. Before you close , I hear the music in the background.

(Host Greg Syzmanski)

Go ahead you can stay for another minute.

(Guest Julianne McKinney)

Okay.

(Host Greg Syzmanski)

It’s up to you. Why don’t you come back for another two (2) minutes on the other side of the break and then we’ll finish up, okay? Well be back to join McKinney in three (3) minutes on the “Investigative Journal.”

Say something at the break.

(Guest Julianne McKinney)

I did, I want to thank you very, very much for taking on this subject. There is so few people in the media. As a matter of fact you’re the only one I know of who has the guts to address it.

(Host Greg Syzmanski)

You know it really doesn’t, in defense of every media person I don’t think its guts in a sense, maybe it is? I don’t think, I don’t consider myself as having guts in this issue. I consider it to be an issue that you need to take time to understand and that’s what I would recommend to the people in the media who haven’t touched this issue. If it isn’t being down right censored by someone above you, at least take the time to talk, I’ll spend time talking to you about it because it took me a little while to figure it out. I’ll tell you what, its people like you who need to be applauded because your efforts that’s bringing this to the forefront. You are laying your credibility on the line. But I thank you anyway for your kind words and with that I wanted to say good bye to you and we are going to have to move on and we’ll have to have you on again to talk about this and thank you so much.

(Guest Julianne McKinney)

And thank you very much.

(Host Greg Syzmanski)

And that was Julianne McKinney and she was an authority on the use of Electronic Weaponry and Microwave Weaponry and she was with us on the last hour and half.
