

“WHY PEOPLE ARE TARGETED”

Some people are targeted for research. Some people are sensitive. Some people are just, very slightly sensitive but becoming more sensitive and other people may be sensitive to particular different frequencies. So, there are a lot of different things there all at once going on. I have a list of; this is going back to when I was questioning spies in the cold war. I have a list of probably 25 to 30 frequencies which can induce maybe up to 50 neurological illnesses.

“THE IS UNDER THE DIRECTION OF THE UNITED STATES AND THE WESTERN COUNTRIES.”

The problem we have here today is that under direction of the United States Government in 1976, most of the western countries, Australian, Britain, Canada, and the United States. They were all advised to keep everything to keep it secret so that the Military and the Industry could be protected, you could protect their profit margin and if the people in the Military they were using could give them tumors, then they could start law suits. So the advice in 1976 from the American Government was not to tell people the truth. Keep it secret. That is why we have this mess today is because of this industry, what I call the silly boys that are coming out of the university these days with their electronic degrees that sewed all these chips together, they have absolutely no idea what's going through people. They don't know the pulse frequencies and what they can cause and so what we have now is really a runaway train and there will be so many law suits if the truth were known and accepted, so many law suits that the whole industry would be bankrupt. Coming to you other question, you asked about, “Burns in the skin, tinnitus ringing in the ears, and bruises on the skin.” What happens is the “Sensor Cells” they leak ordinarily. When I leak, I don't mean “Leak,” like a leaking tap. They leak or pass out little chemicals. Now, when these chemicals are passed out, they trigger neural activity through the body and your senses work. One of the things that microwave or radiation will do is, it will release extra calcium in the body. When you release the extra calcium in the body, it can trigger the cells that leak, it can trigger those to leak much more. So, what you have then are a series of false sensations. Now, if you have leakage on the skin, what will happen is the skin will become itching, it will start reacting to everything. If you have extra leaking going to the cochlea going to the ear, then it will imitate some form of sound so you will hear a screeching, a buzzing or a high pitched whine and you will be hearing, but it's a false sensation. So you can get these and the part the of the ear which is getting the signals its making the that part of the ear vibrate, it goes to the brain saying this is what I'm hearing and the brain interprets the sound as a tinnitus, as a high whine. So, you have is leaking. The other thing you have with the skin is these waves they are electric and magnetic, made up of an electric and a magnetic component. The magnetic component tends to go inside the body, electric component tends to go around the surface of the skin and that is well cause itching and scabs and burning sensations. So, there are a lot of different things in that question that you asked.

“THE ENDOCRINE SYSTEM”

The endocrine systems which are the pituitary gland, the pineal gland, the adrenal glands, thyroid, parathyroid they will control the bodies temperature and they control how you feel. Now what happens is the endocrines are particularly sensitive to microwave radiation, particularly sensitive and if the microwaves are affecting the any endocrine glands for instance, if they affect the adrenal glands on the kidneys and that is known to happen, then what you have is, is you will have Cortisol being released into the body. That will cause heart palpitations, a feel of panic even and within two hours your immune system will start to crash and when your immune system crashes then you can have your joint pains and your, all the other things, so that is the adrenal. If you have the extra calcium around the body which most people have in microwaves and it reacts to the cytosol in the brain. What happens then is that you get a whole bunch of spurious signals going through the brain the brain can't handle. It may be telling you, “You are cold,” it may be telling you, “You are hot,” it may be telling you, “There is pain somewhere in the body.” It depends upon how your physiology is made up. Yes, you can get all of those from microwaves.

This is known, if we go back to between, so that the 50', 60's, 70's, 80's, if we look at that era, even the 90's and this takes, this will take some believing but I have documents and you are welcome to photograph, if you wish, the

documents and according to the documents the English, Australian, United States, with the United States I mean the CIA, The Departments DIA, Defense Intelligence Agency with Associated Universities and the Canadian Secret Service, they experimented on around 500,000 (Five Hundred Thousand) over 40 (Forty) years. Now the 500,000 (Five Hundred Thousand) people consisted of the poor, psychiatric patients, pregnant women, children over the age of four (4), Muslims', Catholics, Service Personnel, The Service Personnel were picked because they were all very young and fit making it an ideal epidemiologist study, Service Personnel, so that sort of groups, as I say religious groups, psychiatric patients, the poor, the you know, pregnant women, children. Five hundred thousand (500,000) was experimented on, the summary of the experiments and I have two statements. Oh sorry, it is Lars is it? You wouldn't pass me the piece of paper on the desk just to your right in front, no, the one to your right, to the right of that. No to the right, you're going left, lets it. No, no sorry, the one with all in pencil with all the writing going down. That's it, that one; you wouldn't mind bringing that, please, would you? Thank you. Its' worth reading their exact statements. Could you pass me my glasses please, Lars? Thank you, this takes thank you. These are two statements but I'm not deliberately picking on Americans. The British were involved in this as well. This is from the 1986 (Nineteen Eighty-Six) after these 500,000 (Five Hundred Thousand) people were experimented on. This is from Naval Surface Weapons Center in the United States and he said, "We can change behavior of cells, tissues, whole organisms," in other words any part of the body. We can have a six (6) fetal times higher fetal mortality rate, cause birth defects and induce malignant tumors in human cells. From 2001-2007 there was a secret course held. Number 11 (Eleven) on this course the opening statement was, "Students who will be familiar with current knowledge, that is cancer, memory, brain dysfunction, damage to the eye, skin and birth defects from radio frequency, microwave radiation." These are the ones we have the documents for.

In fact I have all sort of 15 (fifteen) project names. The U.S. Government was taken to court with experiment. Generally the microwaves experiments they had the letter "MK" before the code words. So, the one taken to court was, "MKULTRA," now, MKULTRA I think it had a budget of \$160,000 (One Hundred and Sixty Million) dollars or something and the one projects they were 262 (Two Hundred and Sixty-Two) separate human experiments, like on the poor, the children, it wasn't just microwaves. They used all other frequencies, they used microwaves with hypnosis, microwaves with drugs, they used combinations of things and that ah and their boast was they could, I know they could induce any psychiatric illness that would fool a psychiatrist so that they could instill psychosis, schizophrenia, paranoia, they could also bring on blindness, heart attacks, liver dysfunction, heart dysfunction, anything in the human body just by targeting that organ and they still can.

"TETRA AND THE TETRA REPORT"

TETRA Report: <http://www.planningsanity.co.uk/reports/trower.htm>

There will be, but I won't know of what is because that is still under the "State Secrets Act." I can only get a hold of what I can get a hold of from people who send it to me. But it is still going, today even know, TETRA is an experiment with TETRA and I have the original Government Documents with TETRA they say at the beginning when TETRA was, when TETRA was it was forced, TETRA was forced out and according to one document I've referenced in one of my reports it was between the American and the English Governments that forced TETRA out and the reason according to the document they were denied this, but I can believe it is that they all the gubbins is made my Motorola which is an American firm and by law anybody in America that makes cell phones must give the cipher keys to the Government. So, the Government has the ability to tune in and listen to every single conversation that is going on. Now, when you've got the Bush and Blaire forcing out TETRA, and again this is documented and I've reference it, the aim is to sell TETRA to as many European countries as possible, as cheaply as possible so that they buy it. So that they will all buy it. Now, once every European has got TETRA, what it means is, is the American Government can listen in to every country that has got TETRA.

So what we have is TETRA is now going worldwide. It's in Africa, it's in India, it is going all over the world. So, it isn't just people, police officers, ambulances, it is you're MI-5's, you're MI-6's, your Secret Services, your Customs, your Air-Sea Rescue Services. Every Secret Department in every Government and TETRA I think is now, is what, 200 (Two Hundred) countries. So every Secret Department in 200 or so countries can now be listened to by the American Secret Services.

Now you can see why the American's want this and you can see why the British want it, but I was invited to Amsterdam a few years ago and with the Police Chief who, he was sacked for talking to me and a lot of people are sacked for talking to, I can tell you know. A Police Chief called me over there and he said, we were having in the hotel, "The problem that I'm having Barrie, he said, "I know the Americans' can listen to what we are doing, we catch drug runners," and he said, "I can spend 2 (Two) or 3 (Three) years hunting down a drug cartel. Well, if the Americans' can listen in to all of our operations to catch this drug cartel, you only need one American Official who is bribable," he said, "Now use your imagination, is it possible that an American Official that is bribable?" He said, "He could listen to this pick the information up pass it to the drug the cartel and I've lost 2 to 3 years over really confidential, highly secretive operation," and he said, "And that is what worries me." He said, "Is the fact is that everything that we are say is being picked up, decoded and stored by the Americans."

"EMERGENCY SYSTEM FOR THE EMERGENCY SERVICES AND THE MILITARY"

It's an "Emergency System for the Emergency Services and the Military, and the Secret Services." It's used by everybody. But that is an experiment and they said in the beginning, they said that it has a pulse frequency which is known to cause calcium reflux. In other words, the pulse frequency will affect the way your brain works, and it will affect every organ in the body and cause tumors and they say in the initial documents, which I have, they say this is experimental until 2018 (Two Thousand Eighteen) and we cannot rule out cancer and neurological damage. No, the Police weren't told nor were the Fire Brigade, nobody was told. It was kept secret from them. The experiments, every Police Officer, Every Fire Brigade, Every Ambulance Worker, they are all part of the experiment but they were never told, that they were part of an experiment which is actually illegal under international law. Yeap! I've had sitting where you are within the last few months five (5) lady police officers, all with throat or breast cancer and they have all said, "That when they've complained that it's where they've been wearing their TETRA sets, they have been victimized and bullied," I have an ambulance lady ringing me up Saturday to say that she carried her TETRA set on here, on her hip and she now has a tumor that needs a biopsy and she's coming to see me Thursday or Friday from up North, but there are lot tumors now appearing and we think lot of neurological damage as well because I've always said in my reports, You haven't gotten a copy of my "Hire Reports, have you?" I've always said, "That If you police station where TETRA is installed," it is the higher confidential reports, "Highly Confidential Reports."

I've always said that, "Where you've have TETERA," and I've been right around the world talking about this, "Any Police Station, the Police will become more bad tempered, more aggressive and more violent, always. There will be more car accidents involving police drivers, there will be more cancers involving police, and the sickness rate will increase," and I've said to anyone around the world, "Find me a Police Station where it is not happening where it has been installed for six (6) months or more."

I think didn't anticipate how quickly the cancers and the bad behavior would come in. I think what happened was the Americans' thought let's get this around Europe because America has really two problems, the United States. One is the Russia and China affect because Russia and China are a threat to the United States. The only other threat to the United States as if Europe comes together. So, with TETRA throughout Europe really, when you have experimented on 500,000 (Five Hundred Thousand) people and caused deaths and had them committed asylums for the rest their lives just to experiment and caused women to have miscarriages, birth defects, genetically deformed children. Once you've done all that, having a few police officers and ambulance workers and people die is really immaterial because there are plenty more to join, there are plenty of jobs. So, and I think it's from the American Government's point of view it's we'll get the British to force this out, is which is what Blaire and Bush did, "Okay so some people are going to die throughout Europe but we can at least listen to all the conversations, you know," because there are better systems and safer systems and they were warned by people like me. I was commissioned by the Police Federation to write the "Safety Report," and I condemned it out right and they called a meeting with the Police Federation with all the officers and I was there at the meeting and said, "You use it or you get another job." Simple as that, they said, "Use if or get another job,"

and they would not let anybody complain. They follow a system, they Police, the Governments', the Secret Services', anybody who has authority in these countries they all follow the same advice and it's called, "Active Denial," It's called, "Active Denial." The moment you say anything, bang it's not true, it doesn't happen, "Active Denial." [About dog] Oh, he's okay; I'll let him out in the front in a minute. It's called active denial.

No, we're not talking many. I had a meeting, I don't know what the equivalent is in Denmark or the United States, I had a meeting with the School's Minister here, the top, the Minister for schools. He is the top person in the country responsible only to the Prime Minister and he runs all of the schools and I had a meeting with him for 25 (Twenty-Five) minutes and I said, "You must not introduce Wifi into the schools," because it is going to cause genetic damage, not to the children in school, but to their children and their children. Where, I shall need to explain this we're looking at the school children today, we we're looking at the eggs being damaged in the girls. They will have a baby when they grow up which that may or may not have genetic damage, but the real threat is that child, the grandchild. That is where most of the damage is going to come out. We've got this site, I've actually, I did cartoon for the Minister, which I can give you a copy if you haven't seen it; I did a cartoon, because to be quite honest the level of their science, you know, is less than an eleven (11) year old. So I did it as a cartoon, "There you are, that is what's gonna happen and you must not introduce Wifi into the schools" and he said, "I am powerless to stop it." Although he is in charge with everything to do with schools, he said, "Health Protection Agency" which is only a handful of people, they control all the science of all the country and if they said, "We want it in," it goes in and that's it. He said, "I cannot go against the Health Protection Agency."

There are lots of goals. If you want to come back on that pregnancy thing and know how it affects women, you'll have to ask me later. The first goal, I mean, Wifi I read in Europe worth about \$260 (Two Hundred and Sixty) Billion Euros a year. Now, when you come to the rest of the world, you know you count of hundreds of billions of dollars, that is worth maybe 20% (Twenty) of the population becoming very seriously ill, having miscarriages, child defects, birth defects, and 40% of the population probably being sensitive and ill but you still have 60% of the population well and you make all this money. That's one reason. The other reason is that you can listen to every single person's conversation all of the time even if your phone is off.

No, that can't then although in some they can if they have actually handled it they can because they can put in a capacitor and even if your phone is off they know where you are, exactly what you saying, who you are meeting with, everything and if you turn the clock back, if you go back 15 years, if somebody from your government said, "Carry this, I want to know exactly where you are day and night because I'm going to have you followed. I want to know every single thing you say, whether you like it or not, I want to know who you are talking to, what you're saying to them. People wouldn't have carried them.

Just because you can push a few buttons and talk to someone makes you lazy, but they now know exactly where you are, what you are doing, who you are talking to. It isn't one country, it can be up to about 45 (Forty Five) countries internationally doing this, not just you're own and one of the reasons for it is blackmail and because you have got all of these teenagers now, talking to their boyfriends and girlfriends dah, dah, dah... you know, mom's out, come over whatever, a joint, a party and some sex.... dah...dah...dah ... you know. Up to 45 (Forty-five) countries are storing this and when you've grown up and you're a Congressman or a Congresswomen or if you have something that you want secret like you're a pedophile or a thief, you know they can come straight back to you at any time and say listen to this. But so you have also blackmail, which is a very, very strong incentive for countries and they monitor every single call in the world. Every single call and it goes even further because with the United States, now I'm not picking on the United States, but they have a Super Computer now that not only gets every single message in the world, but also tests it for voice recognition, so if you use somebody else's phone, they will know you've got their phone unrelated back to your phone.

"CELLDAR"

On top of this, I mean, it's phenomenal what this industry now has the power to do. You have biological and microwave warfare, they can make you ill, they can target you any transmitter, and it's called "Cellular."

Cellular, you have different; there are different types of Cellular now, if they wanted to target as an experiment or if they didn't like you. What Cellular will do from any of the microwave towers, any of the hundreds of thousands of them and you don't even need to be carrying your phone, it can lock on to you and once it's locked on to you, the computer takes away all of the things that are not moving, like the buildings and trees and lamp posts. So now the computer is following you, it is like radar only from microwaves so it's now following you and if you walk up the road, the transmitters will follow you.

Your whole body pattern, from your whole body, of course it can see through walls, microwaves go through walls. You see, so you can be followed everywhere, they know where you go to the toilet, how often, where you sleep, where you go through your house and when you go to somebody's house and once it is locked on to you it can just follow you everywhere.

No, you can use microchips, but now you can follow people and then you can target them and if you can target them, you can send pulses to their brains, pulses to their heart, so if they want they can have you followed, they can make you go mad, they can make you have a heart attack, they can make you go blind.

They are government scientists working, sometimes they are university departments. Governments have an enormous research budget, the English; United States Government's have enormous research, resources and they will employ university departments.

It may be, it may be that the university department doesn't know that it's actually building something that can be used against the people. For instance, one of the machines they made was in shops and they still use them, now in shops you can be targeted in shops and beam microwaves and other waves into your brain in a shop and they also use them in fast food centers. Now, universities develop these under the grant of a government with lots of money and the universities were told it's to deter shop lifters. So, but what I mean, instead of saying, "Don't steal this." You can say, if you want to, "Buy this."

Once you've got it the universities may be innocent in some cases, in other cases they are certainly not. But, the main culprits are psychiatrists, psychologists, doctors, specific scientists who have absolutely no morals or no scruples. In this country I know at least one who is absolutely desperate for a Knighthood and will say anything he is told to say simply because he wants his Knighthood and the other thing is what's interesting is these doctors, and psychiatrists and scientists; they are able to work above and outside the law. And this isn't the law in this country, this is International Law. And they cannot be taken to court and people have tried. In Canada they tried to take them to court and they said, "Official Secrets Acts." National Security, we cannot be questioned and the people who, they won their case, but not a single scientist was mentioned or charged. In this country there was a case where, it usually takes fifty (50) years to take scientists to court. In this country there was an experiment carried out on service personnel where they said we want to test different flu vaccines, in fact they were nothing to do with flu. They were radioactive and biological experimental things and a lot of people died and got all sorts of bad things. The Government were taken to court and again not a single scientist appeared, or was named, again "Official Secrets Act" a little bit of compensation for the survivors. So, what we have is we have scientists who work above and outside the law and now protected.

Well, you can take them court but it takes 50 (Fifty) years for a start because the government will say, "Prove it."

So, you, they will lean back in their arm chairs and say, "Prove it," and everything you throw at them, they won't reply to. Now court in this country costs about \$100,000 (One Hundred Thousand) Pounds a day. No you don't get legal aid for this, there are no charities, so if you want to take them to court you are looking at a \$100,000 (One Hundred Thousands) Pounds a day and I have been involved, I mostly representing the poor court. [Excuse me that is my stomach rumbling.] I mostly represent the poor. But I've represented I think two (2) billionaires and couple (2) of

millionaires. Now, one of the Billionaires he wanted to take the industry to court. I was the scientist involved, he had his legal team and he said "I wanted this industry to go to court" and they said "Good, take us to court" and then we looked at what it would involve, they said, "We will call all of our experts and they will talk for about three (3) years."

Our experts would need three (3) years in court. Now you are looking at \$100,000 (One Hundred Thousand) Pounds a day for three (3) years before you even start.

And again because it's too late and I was involved in a spy case with one Major European Country where they Prime Minister and the Minister's were, what I said was, they were targeted and bugged. Now, if you want somebody that's corrupt, I mean you needn't go any further than our government, I really mean they are corrupt. And we're talking about little boys and little girls, you name it. I think, in the last elections 60% (Sixty) of our government were found to be thieves or corrupt, 60% (Sixty) percent! It's just phenomenal, now when you've got all this information on these people. I mean the industry is now so powerful.

I'll mention one more thing and then I'll stop and check my wife; she's in bed all the time now. I'll see if she wants a sandwich and I'll get you some chocolate biscuits. I have probably in my world travels, I have probably sat down and I'm not boasting here, I've got no reason to boast, I don't want to be famous, I've sat down to 45 (Forty-Five) to 50 (Fifty) royal people, Kings, Queens, Princesses, Leader of Governments, Leaders of Countries, and Advisors of Countries, all that sort of people and this, this all came, I found that when I was talking to these people they all started telling me the same story and I found this fascinating and like big jig saw puzzle and it was King and he put the whole piece together and I was having, he wanted a private conversation away from the royal family and away from his royal advisors and we were sitting in his garden on just his garden table, he leaned forward and he said I tell you what's happening Barrie, he said, he said "Since this industry came into my country," he said "I'm now losing the viability of my country." And I said, "Well, how?" And he said, "The Industry come in, they come in with lies and they say well these are radio waves, they are perfectly harmless, blah blah blah, you'll make lots of money, millions and millions, zonk." Hundred Thousand transmitters (100,000), he said, and this is one of the kings in Africa. And the first thing I noticed, he said, "We lost our ants. Well, that may not seem important but the ants crawl all over our plants, they don't eat the plants, they lick the juice, but they keep off the insects that do it the plants and these are our fruit bearing trees." He said, "Now we cannot grow fruit." He said, "We've lost our bees and our pollinating insects and so now we cannot grow our crops. People are becoming ill and we cannot afford the medicines." He estimated it was about a 40% (Forty) percent increase in the health bill. Now I am in trouble, he said, "Because I can't feed my people, I don't have the medicines and this Industry is running right across my country." He said, "And then the next thing that happens," he said, "the country involved, namely the United States and the Indonesian countries," the two big apart from I know is it Denmark or Norway has a big mobile? But they weren't involved anyway. But the Indonesian countries and the American countries, he said, "As soon as they've caused all this chaos, they then come in and say, "Look we can bring in fruit, we can bring in medicines, rather than money we'll just take a little bit of land here, will put a military base here and have mining rights for that." He said, "I am losing my land to Military Bases and Mining. There is mass immigration from these countries to mine and I can foresee in the future where I will lose the viability of my country." And he said, "If I didn't know better I would think it was a plan to take over my country." And he said, "Now if you want somebody's country there's no need of fleet of bombers, you just put mass transmitters and it would just happened." He said, "Now I've got Military Bases and Mines and people coming in the thousands to operate these," He said, "But I get nothing from them apart from the fact that it is all going out and this was born up, there was a farmer asked to see me," and he said, "I was cycling down the road to my farm, I've worked there for 40 (Forty) years," he said, "There was this man with a gun in the middle of the road, a gun." And the man said to me, "Where are you going?" And he said, "I'm going to my farm, I work there." And he said, "Not anymore, that is our land and if you pass me, I will shot you and I have the legal right to shoot you. This is now a Military Base." And the chap said, "No, it's my farm and I'm going to work." Well, if you pass me I will shoot you. Go back. He was sent back and that was it.

I did a few countries whilst I was in Africa. Representing the townships, but now, it maybe, it may have been by accident, but now sort of Japan and the Indonesian countries, if you think about what they want minerals, land, oil, it

wants a lot of things, Japan and if you think what America wants, military bases all over the world for missiles and what have you and you're getting it now. But this was the King telling me.

"TINNITUS, RINGING IN THE EAR"

You did ask me on the telephone and I did say it's a fairly lengthy answer. There are several different answers to this. The first I've explained is that the sensory cells, as I've said, "Can leak," they leak naturally and if you have excess calcium in the body, microwaves can make the calcium leave the surface of cells and flow around. You can also produce extra calcium if the parathyroid gland is stimulated. So with the excess calcium you can then get this hearing sensation that is one. Another is it could be coming from your bed springs. If you have metal bed springs they act as aerials and if the microwaves are going through your bed, as they will do, you may have form of resonance of sounds coming from the bed springs that is another. The most likely answer is if you have water or gas pipes in your house, the microwaves going through the house can vibrate that gas, especially if it's stationary overnight. The microwaves can vibrate the gases, it is like blowing over the top of the milk bottle and you get this oooohhhh. The microwaves could be causing resonance in the gas pipes or the water pipes or the water pipes or any other hollow container. It could be sensory, it could be the bed springs, it could be the gas pipes.

'SYNTHETIC TELEPATHY'

It could also be if you're being targeted it is called "Synthetic Telepathy." Not only can they make sounds in your ears, they can actually put spoken word in your ears and you can hear proper voices. Now that was a long time ago, these days they can put a pulse signal into your brain, they can produce chemicals. One of the chemicals they like to produce is, I can't think of the name at the moment, when you fall in love as a teenage for the first time and you have this overwhelming trust for the person you're in love with. They produce that chemical and they can produce that chemical at the same time you are getting this sound, now so you trust "The Voice." Now, the voice, depending what they know about you, if they have listened to you telephone calls for years they will know who you trust and what you believe in. For instance, if you are highly religious, it could be an angel talking to you; it could be God; it could be a spiritual being giving you advice and helping you and that could come at the same time that you have this chemical, so that you will learn to trust this voice. Over, we are talking months and years and years and years the voice will follow you and help and then what they can do, is they can then have the voice start telling you what to do for your own benefit.

Oh, subliminal, oh yeah even commit a crime, kill somebody, blow somebody up. Once you trust this voice and you've got this addiction to the voice. So, these can happen and they have happened and people have been committed into asylums for this sort of thing.

(English Physicist Dr. Barrie Trower) I don't know of anybody who is immune from brainwashing. I don't know anybody. I think if they want to they can target anybody. The reason I know this is because I worked in a psychiatric center where I believed I was doing good with a psychiatrist and you can target anybody. If you have ever, there is a simple test for yourself, if you have lost control of yourself, if you cried, if you lost your temper, if you shouted in anger at somebody, if you have woken up 4:00amclock every morning with a baby crying and you thought "Oh God I hate this child!" No....

"DEFENSE MECHANISMS"

You can help yourself, there are defense mechanisms I put them down in a paper. This one I sent off to for published, to be published, "Are You Being Targeted?" You have a copy? I have only written it, it isn't even published it yet.

I sent you a copy, an advance copy. I've sent it away for publication but the magazine isn't out yet so whether it is on or not, I don't know. There is something you can do and it is in that article. If you know you're being targeted and you don't want to be targeted, if you are being followed by "Celldar" you can make it lose, you can make it lose you by going into a crowd. It can follow you into a crowd but if you mix with a few people and they've all got the same body images. Then it will not know which one. What happens then is that it will try and lock onto your phone. If you're not carrying a

phone then it's lost you. But if you're carrying a phone, they will always know where you are in and out of a car. But you can and another thing you can do is and it is in the paper that I sent to Debbie, you can do if you realize that you are being targeted and followed just go into a crowd, just mingle with a crowd in a shop and leave by another door, you throw them off. If you have to carry any form of transmitting device like a phone or an ipod, ipad or whatever they call these things, carry them in what like a child's pencil case like they take to school, a metal tin and they have their protractors thing in geometry sets in the little metal box. Carry your phone in that because the transmission won't get out or in. They can't track it.

You can wear protective clothing. There are now specialist firms who make ordinary clothes that stop all microwave transmissions going through.

You can buy ordinary woven clothes now. I know there's a firm in Scotland that does it.

You'd have to search; you'd have to look in "Electromagnetic Clothing, Scotland." If you were to type into a search, "Electromagnetic Clothing, Scotland, Protection," it will come up.

(Female TI 1) Why does it, is it the spring of the bed, why does it feel like the frequencies are coming up from the springs of the bed?

(Barrie Trower): It can be anything metal; it doesn't have to be the springs from bed. One of the reasons for the high rates of breast cancer is because of the metal in the ladies bra. If you think about it, you never put a spoon in a microwave. Because it absorbs the microwave, sparks and then it sends out another frequency, another wave. So what happens is, what's happening with your bed, your bra or if you have metal on your glasses. Which are again very, very bad, what happens is the metal absorbs the microwaves, the atomic particles vibrate, each time they go up they absorb the energy, each time the electrons come down they transmit energy. So what you have from your bed is transmissions coming straight up into your body at slightly different wave length. With your bra you have transmissions coming out but the cup of the bra is parabola and what you have is the transmissions coming out into one small area of the breast of a just a few hundred cells and mammary cells are particularly sensitive to any form of radiation. They don't like to be irradiated.

Again, with glasses, you absorb them and they readmit onto cornea onto the front of the eye. So you are really sleeping on top of an aerial, a transmitter.

(Female TI 1) When this energy goes passing through your body there are certain parts that I find of my body is that is always pulsating like my tailbone or the back of my neck, the back of my head.

Tell you what; it is because you have resonance occurs in the body, you have circular tronic resonance that occurs in the body. With the circular tronic resonance is, think of a trampoline. If you jump on a trampoline and you bounce up and down and you get a nice steady bounce. That will be your natural resonant frequency for a bounce. If a 56 stone man jumps on and starts bouncing at his bounce you have no choice but to bounce at his pace cause he will take over. That's what happens in the body. The chlorine, the calcium, sodium, potassium, the major neurotransmitters in the body, they have their own vibrational speed. Now for instance potassium vibrates at 16 vibrations a second, so anything vibrating at near 16 per seconds will take over potassium and change it. Again, with your brain waves, the delta, theta, alpha theta they have their own frequencies it will take over the brain waves. So, you have resonance there, your organs have their own resonance frequencies which can be taken over. You have circadian rhythms in your body. Your eyes fluctuate at a certain pulse frequency a second. All of your body pulses and fluctuates at its own speed. Every part of your body our body is vibrating. So what you have with these vibrations is when they come in it is like the 56 stone man jumping on your trampoline and your body has no choice but to vibrate at whatever is coming through it and this is one of the problems we have because there are some 50-60 different types of vibrational frequencies coming through.

No, your body has to follow, have no choices, nothing you can do to stop it. Absolutely nothing you can do to stop it.

The problem is, you are probably right. We have now Kings saying that they are going to lose their countries. We have animals becoming sick because it is not just us, as all living cells are the same, deep down, any blade of grass can read our DNA sequence. Any tree can read our DNA sequence because once you get the cellular level there really is no difference between the cells in that leaf out there and mine. The only difference is the outside of the cell has cellulose outside to give it rigidity but when you get down to the DNA its identical but that the fact that our DNA makes us grow and talk and move this way cause we only use a very small fraction of our DNA. The plants have probably very similar chromosomes, very similar DNA but uses different genes, it's really all of the genes in the DNA from every living thing is made up of the same four bases, everything, we are all the same. Now, if you're going to affect people, you're going to affect animals and if you're going to affect animals, you're going to affect plants. So, what we are actually doing now is we are reducing the immune system and the navigational system of every single living creature on the planet, every single one without exception.

You are absolutely right Steven. I've twice been invited to give The Glastonbury Festival Lecture. There's an annual festival here. Called the Glastonbury Festival, it is a music festival, a intellectual festival down in the west country and people from all over the world come to Glastonbury. Twice I've given the Anniversary Lecture and on both of them; one of them is on the Internet. On both occasions I've actually said this, "That we are now losing, we are losing our forest, we are going to lose our pollinating insects, we are going to lose our crops, we are going to lose all of our animals," and there are to my knowledge around 6 ½ thousand peer reviewed and published on this that are being totally ignored by the industry and by the governments. They have even appeared, three of them have appeared what was is probably the best magazine in the world, science magazine which is "Nature." Three of them have appeared in "Nature" and they are still being ignored.

Or it may be that you want to destroy the animals and the crops so that you can come in and offer aid. It may be intentional.

Well, I mean, that is what the King told me and he is not the only person who has said that to me. I've been in a country that is an island and they have to import everything. They said, you know, their drug bill has gone up roughly 40%. Any little live stock they did have are none existent, their plants are almost nonexistent. So they are totally reliant on the countries importing and this island is very strategically placed place for a military base.

So, I think it started out as a probably as a really good profit making industry where the "Secret Services" could have a hand in it and gain information. Then they suddenly realized, "Hang on," we could take over countries.

I don't think there is one. I think it is unfolding and people are deciding as they go along.

It is the circadian rhythm of the eye I think is one of, it's very near to the ordinary cell tower. But there are, there is a lady. I should think of her name shortly, Fellow of the Royal Society. Very, very clever lady, in fact she took me to dinner. I shouldn't forget her name. She has written volumes on the eyes, and how it affects the eyes because eyes are moist. Anything moist will absorb microwaves. So eyes will absorb much more than, the only other eyes is the DNA in ovarian eggs. They are very moist in the eggs; they absorb 10 times more than the rest of the body and the only other part of the body I know that can absorb microwave radiation are the eyes.

You can get multiple chemical syndrome or sensitivity. In fact the symptoms of the "Multiple Chemical Sensitivity" the symptoms are the same as "Electro Sensitivity." And the reason is once the skin becomes sensitive it can leak. Not leak as we would see it, but leak atomically and when you start destroying the fabric of the skin like the blood brain barrier inside the body or the other barriers then other chemicals can leak in and then you can get multiple chemical sensitivity from, you can develop that from microwave radiation. So you can be chemically sensitive, you can become chemically sensitive and/or electro sensitive at the same time.

Any odors are really just chemicals that are flying around in the air. So, yes anything, anything at all and I'll tell you who has written a very good paper on this is Dr. Andrew Goldworthy he was a Lecturer at Imperial College of

London for 40 years. Now, Imperial College is the Oxford and Cambridge of London. You don't get to teach there if you're stupid. He's written a very good paper on this.

Of course you actually taste smells. You don't "Smell" "Smells," you taste them. When the gases come in they are then they form part of a liquid, a fluid and you taste them and so and once you are tasting them you have this chemical as a fluid in the body then it can do whatever it wants to do.

If the sprays have a metal component, for instance some have aluminum droplets, some have small metallic ions to make them settle or react. If you have a metallic ion that will automatically react with the microwaves. If they are iron based, because we have iron in our brains and bodies anyway, this goes on anyway, but you can increase this. This is called the "Fenton Reaction." It is an enormously long chemical reaction. The stuff nightmares are made of when you look at it. But basically if you have iron in the body, as we all do, but if you are breathing it in as a form of compounds from the spray it reacts with microwaves with peroxides which you also have in the body. You take in peroxide with some drinks and in some teas. Now, once you have peroxide, iron and microwaves you automatically get what's known as the "Fenton Reaction" and the Fenton Reaction depletes the iron, so what it does starts depleting the iron from the brain which can bring on early Alzheimer and Parkinson's and make you anemic. But the other end of the reaction, "The Fenton Reaction" is the Hydroxyl or the "The Free Radical" which is cancer causing.

"SOFT TISSUE"

In any radiation sickness, soft tissue is the first to go. The reason is that the soft tissue in our body's, the gums, the bowel, and the soft tissue replaces itself about every six weeks. So, if you start damaging the soft tissue, within six weeks you are going to have a bleeding bowel, a vaginal discharge, gum infection, skin infection, and skin problems. That sort of thing, it usually is the first sign of radiation sickness. The body reacts the same whether it is microwave, gamma rays or whatever; the symptoms are called "Radiation Hormesis." The symptoms are the same and in fact to give you an idea how ignorant governments are it took 30 years for the lady doctor to stop pregnant women being x-rayed. She spotted right away that the children were being born with leukemia where they would x-ray pregnant women and she told the government that, the same government we are talking to, she told them that this was causing and they said, "Go away silly girl," you know, words to that effect. It took her 30 years to get x-rays stopped for pregnant women because the industry opposed it.

It took on a similar vein it took a doctor from Scotland, a very clever man, 20 years once found "Cholera" in feces in water. It took him 20 years to get that stopped because it would cost money and smoking is a good example in 1964 there was 32 university papers linking to smoking to cancer and it took another 30 years to get. So, I mean, governments and industry will hold off for 20-30 years in every case because it costs them money and they avoid law suits.

So with this, we have already had people die from microwave sickness. It's going to take a long time because the industry now is so powerful. It really is powerful and it can tell governments what they will and will not do and say and that is the problem.

"HAARP, SATELLITE BASED"

It can be many things; it can be anywhere at all. Yeap, it's not difficult and the you've got HAARP, you've got "H-A-A-R-P," I believe there is a similar device in the Soviet Union, We've got one in Cyprus, there is probably one in China, with HAARP you can be microwaved anywhere in the world and you can target specific house, you can target entire countries.

(Barrie Trower): Yeap, I mean the, it is in Alaska. The American government says it is for studying weather, but you can just bounce the microwaves off the ionosphere to anywhere in the world and for instance if I wanted, if I were a mad and evil scientist in this country and I wanted to totally destroy the United States and I told this in a legal hearing in London to (3) three United States Lawyers in a case that I am involved in, in Oregon. If I wanted to destroy the United

States, let's say I was an Al-Qaeda and I wanted to destroy the United States all I would have to do is build a 48 (Forty-eight) transmitter site, transmitter complex like HAARP, and I would aim it at the United States, I would think, "How would I make the United States Suffer?" I would go for your wheat fields because your wheat fields feed the entire planet and your economy depends on your wheat exports and your beef, so I would go for both of them. I would think, "What frequencies would make the immune systems suffer in wheat, cellular structures which are known, which would make the beef cattle sick, which are known." I would think right, I can destroy their country what I will do now is I'll make a \$100 Billion dollars at the same time. I would grow wheat and I will grow beef and then when I've ruined yours and there is a world shortage, I will up my price 20 (Twenty) fold for the rest of the world and I will make \$20 Billion dollars and ruin yours and sell mine and it is that easy.

The Russians I think have it, China probably has it, the Americans certainly have it, and we have it. Microwave transmitters are so easy to make. Ever so easy, all you want is a power supply and 48 (Forty-eight) transmitters and you are on your way. You don't need satellites. You can beam the microwaves in the direction and they will bounce off the ionosphere that surrounds the planet. Ionosphere is just space. It is just an ionic layer around the planet. They can make holes through it or they can make it vibrate.

If I wanted to and if I had the capability I could destroy the United States quite easily and if I can do it imagine from MIT, your, what is probably the top university in the world, "MIT." Imagine what a team of clever scientists from there would do with a laboratory and twenty years of research which they've had. I mean, what I've said is just general knowledge; they would be way ahead of that. So, we are getting to a phase now where it's we can literally destroy the planet. We are back to where I remember in the "Cold War" where there were so many atomic bombs primed, loaded and ready to be fired and I can remember when Kennedy was President and the United States and Russia were within a heartbeat of total global nuclear war and they had enough atomic bombs to literally rock the planet off its axis and destroy everything. Yeah, we were within, especially the "Cuban Missile Crisis," we were within; I mean the fingers were on the button, it only wanted pushing. Everybody exaggerates what their countries are doing to make the other countries worried.

Officially every single microwave transmitter in this country just ordinary cell towers, every single comes under the "Official Secrets Act" and they've done that to stop people complaining to their members of parliament that they don't want it there. You see once you put something under the "Official Secrets Act" you can't challenge it.

You will get some reflection. If it's got to come through rain, hail stones possibly, snow, but generally no. It won't make any difference. The spectrum analyzers, "Can a signal be picked up?" Yes.

You would need to know what frequencies they were using, but you could. But theoretically you can. If you can send anything, it can be decoded. If I wanted to, if I wanted you to hear a voice a voice of an angel and I would send first of all the microwave which would be the carrier wave then I would put the modulations on. Now if you think, think of an airport and think the conveyor belts that carries the suit cases. It's a big rubber conveyor belt going up to the hole of an airplane or they use to have them. You've got this conveyor belt, like an escalator, what do you call it in America, escalator? You know the moving staircase? So, imagine that, that is the ordinary microwave coming towards you, all of the suit cases are dumped on to reach the airplane.

They would be the modulations, so it modulations as it comes, it would trigger something in your brain to make speech. Like an ordinary sound bit. So, all of the sounds, the colors, everything, they would be modulations. Now, if you're sending sounds and colors and speech and what have you by modulations, they can be decoded.

What they would have these days they would have a spectrum analyzers went through, the big one they have in America now, in terms of power, the one in America the Super Computer, I am trying to think of what it is name is. It

can listen to everybody in the world making a phone call all at once, individually and log them. So, if you've got a computer like that can scan all the trillions of frequencies and think that doesn't work and that doesn't work, but that makes sense. It's like decoding, that makes sense. I mean, a computer of that power would probably decode it in a trillionth of a second.

Microwaves can't go through metal. Is the only thing that will co-opt them. Gamma rays and x-rays will go through metal, microwaves can't. So, they will go into the metal they will make it vibrate, but microwaves cannot go through metal. So, the best way to stop microwaves is metal. With clothing they now weave in copper threads or silk threads, that stops microwaves. Microwaves are very easily stopped, but they will go through brick, concrete, they will go through anything. Quite easily, what they cannot do is go through is metal.

"METAL DEFENSE"

If you are putting some form of a metal defense, like around a house? If you are putting up some sort of metal defense around your house, don't use cooking foil cause cooking foil has holes in them and microwaves can get through. Thin aluminum foil or tin that will stop it and the easiest thing to do is, if you do a wall. I mean people use radiator foil, is the best thing. In cold countries like your country, you can get radiator foil its shiny foil you put behind fires that reflect the heat back into the, it's like very, very thin tin. So, if you do a whole wall and you've got a lot of microwave that will build up charge all you need to do is just connect ordinary little piece of wire, like this, to the bottom corner, just run it under the carpet, out into the garden, connect it to a knitting needle that is metal, metal needle, stick it into the ground. That's it.

As you get a positive charge build up the electrons from the ground will come in and neutralize otherwise you would get an electric shock.

You need a nuclear cyclotron to generate x-rays and gamma rays and they would never, ever be able to do that because if you think of the speed of these waves, they can go around the world (7) seven times in a second. So, if you start blasting a house with x-rays, you are going to blast everybody in a straight line until it gets to the curvature of the earth and you are going to kill everybody in that straight line. No you never use gamma rays and x-rays. The only thing they can use is microwaves. If you know how to defend yourself, they will give up. But of course, because it costs a lot of money to target somebody, a lot of money because they got to be monitored and these scientists are on a very high salary, you know \$50,000 (Fifty thousand) dollars a year plus and there is no point in targeting somebody if the money is going to be wasted. So if you put up a fight, they will leave you alone and go to somebody else. There is nothing likes better than a good challenge. So, if I am targeting you and I know you know I'm doing it and you decide to counter act this, I'm going to miss you like a cross word puzzle to me. This is now is a game.

It's a game and I'm going to think, "Okay, let's see how clever you really are and I'm gonna do this and if you, so what okay, and let's see if you can get out of this one?" It's a game. These people are above the law, they have no morals.

(Barrie Trower): They are arrogant and they cannot be taken to court.

"SCIENTISTS and TARGETING"

Scientists are kicking back and they are writing papers but they know if they expose the industry and a very, I can give you two examples if you like. Tell me if I am blabbing too much about? I can give you an American and a British one. In this country, a scientist asked to see me and he said, "I have a really bad problem Barrie," and he was a, he still is a top government scientist and said, "I've just done an experiment and this has to do with TETRA." He said, "I have just done an experiment for the government. I was asked to test the heart and the brain against the TETRA wave frequencies and assess them for damage," and he said to me, "How long would it take you to do that experiment? Well, I said, "Well, I would follow the same path that the drug companies tend to follow, ten years." I said, "I would do cell cultures, I wouldn't experiment on animals, I don't believe in that sort of thing, I would use cell tissue and body tissue

and over ten years," I said, "I would have a fairly good write up ready." He said, "Do you know how long they gave me?" He said, "Within the hour, I completed both and had time for a cup of coffee. Ten (10) minutes for one and twenty (20) minutes for the other." He said, "And clearly that all the people were told was that the police, the country's top scientist has tested it and found it safe." They didn't say it was in ten minutes and he said, "I know this is going to cause cancer. What can I do?" He said, "I've got a kid at university, I've got two kids at college, I've got a huge mortgage. If I breathe a word of this, I'm going to lose my job and I'm never going to get another one." He said, "I've painted myself into a corner. I've done nothing wrong, they gave me the directions, I've given them the results." He said, "I know morally what they are going to do, but I've got my family to think of and I don't know what to do?" I said, "Well, I can't advice, you must do what you think. I know what I would do, but I don't know what you would do." He kept quiet and he let it go through. He thought of his girl at university and his kids at college, you know, this is where my priorities lay. That's one example, another I think and I've met this gentleman. I've stayed in London with him, George Carlo, your American Professor George Carlo. He did a, probably a ten year experiment for the industry and he did a ten year experiment for the industry. He found that microwaves caused cancer. They said, "We're not going to publish," and he said, "They said, no we've decided not to publish" and he went ahead and published anyway. Lost his job, lost his research, job, had his house burnt-down. George Carlo is very famous.

"Carlo, George Carlo." George Carlo now runs a consulting electromagnetic consulting organization in the United States. He's based in California I think and he now spends life taking on the industry. If you say anything, you are out of a job and labeled crazy. If you go against the industry they will target you.

That is the first half. If you go against the industry, they will target you anyway. But, if you're going to run an experiments. Like the 500,000 (Five Hundred Thousand) people. If you're going to run an experiment on human beings, you can't have them know. They have got to be totally unaware that you want to use them. So what they will do is they'll say, "Well so I've got so many 100,000 (One Hundred Thousand) young fit men and women, which are the Army or the Police, and then we'll have some psychiatric patients, and some ordinary housewives, and some teenagers, and we want some that are taking drugs to see what the effect is for drugs and then we will have some do this and some that work and some that don't and we'll have a few alcoholics and you know it's, it's their base.

If you start upsetting them, they certainly will start targeting you somehow. It maybe tapping your phone, it may be telling your boss, "If you don't stop you will lose your job." It may be visiting your children on the way home from school, and say "You tell your mommy that the man from the communication industry says hello" which I've known happened. May be they will follow you. They will let you know just to stop you from going after them.

They would also target your computers. You have computer problems. They have the ability to download everything in your computer, which is one of the reasons I don't have one. If you have a computer, they can download every single thing, even things that are encrypted. Like your bank statements, and your personal anything, they can download it, read it back, they can change it if they wish and they can put it back and they can put it back with anything they want and when we are not unknown for people to switch on a computer and find child pornography in the memory and then there's a knock at the door and you give up then fighting the industry cause now you've got to try work out how it got there. Convince all your neighbors that you're not a pedophile. Tell the police, you could end up in jail.

They can get to you anywhere they'd like. Even if you accidently answer an email or one of these things and it's a sex site and even if you cancelled it. It's still there, it's in the memory. It's in the hard drive. All they've got to do is knock at your door and say, "Excuse me Mr. Steven you've got pornography on your computer." But you say, "Yes, but I deleted it," and they say, "Ah, but it's your computer." It is like having stolen goods in your house and then it is in the newspaper and your reputation is finished.

I was invited to speak to the Welsh Parliament. I've addressed several Parliaments. When I was invited to address the Welsh Parliament and it's on the Internet addressed to the Welsh's Assembly, I think the first thing that I did

was pay tribute to 5 (five) or 6 (Six) very skilled research scientists who all very suddenly committed suicide, one of them the day before his honeymoon, the kind of work that I am doing, in the last few years.

There was George Carlo who has his house burnt down. I'm trying to think of the chap in Sweden. What's his name, "Ole Johansen?" Ole Johansen Profession of the Karolinska Institute Stockholm in Sweden. He sent a message out just last week to say that his computer is being interfered with and he's being targeted and no mail is safe.

"COMMUNICAYES AND WORK FROM AROUND THE WORLD."

I have around 900 (Nine Hundred) communicaes a week. Usually by telephone cause I don't have a computer. The phone goes sometimes almost continuously. Oddly enough I even get calls Christmas day and Easter Sunday. I get calls from people who when they're desperate, they're desperate. I don't think I've had a single day when somebody hasn't contacted me in 12 (Twelve) years. Not a single day, but 900 (Nine Hundred), there are a few ladies around the country and people know these ladies are in touch with me and they email the ladies. They send the ladies emails and the ladies can collect up the emails and then they put them in envelopes and send them to me. So, two or three times a week I'll get a big brown envelope through the door and it will a whole batch of emails, but it works and some people, like in Africa, they a township they clump together cause you have to pay for emails, they clump together to send an email to a lady who posted it to me for help. You know and then I can sort of send a message back, you know. I do whatever I do. So I have what I call an overseas box. I don't accept gifts, money or anything, but when I visit a country, if there is anything left over from the traveling expenses. What I do is say, "You have 20 pounds left over I didn't spend at the airport, can I put it in my overseas box?" and you know they say, "Yes." And that goes to Africa, India, photo copy and stuff like that.

There are quite a lot of people being targeted and just there's lot of people just electro-sensitive or being made sick. You don't have to be targeted. We know that probably a minimum of One Fifth (1/5) of any country's population is going to be ill without being targeted.

It's usually when, soon as you switch the transmitter on, it's instant, it may take 18 (Eighteen) months for all the symptoms to show. It may take 2 ½ (Two and half) years. We know that 1/5 of a country's going to be ill within first 5(Five) years. And we've got 14 (Fourteen) very long epidemiological studies to prove that and then two of them by the industry themselves when they actually said, "These microwaves can cause cancer."

No government wants to turns them off. They're too useful, there is too money, too much information. So the governments are painting themselves into a corner. Whether they think when they are finished being "Government Officials" they can get on bus that will take another solar system, they haven't thought far ahead. You know it's, "I can do this and I can do that."

"DEATH THREATS"

I've had three (3) death threats, two (2) of them in the forest walking the dog and one (1) at a conference. To me it is like the school boy bully. What we've got now is the school boy bullies with the permission of the principal saying, "You can bully anyone as much as you like and if you get in any trouble, send them to me and I'll deal with them." I don't like, I've never liked school boy bullies and you've got to stand up to them and if I'm the only one in the world, I shall stand up to them, but I won't be bullied. But in fact, as I've said, I'm trying to think about who I said it too. He said, "You know, you are not going to live very long with this?" And I said, "Well, when you get back say to your boss that I am in the forest every day between quarter to 9 and 10 o'clock with a dog. I'm the old man with a stick wearing a red coat and a black hat and a black Labrador and that's where you'll find me."

If I were wrong they would take me to court. I have begged them to take me to court. I can't afford to take them to court. If they take me to court, I can take three (3) years.

It is quite easy for you get your chips taken out. If you think he has a chip inside of him (the dog). In case he gets lost, you know, if he got lost and he would be taken to the vet. The vet has a reader, a little transducer reader, they put over the body and picks up the transmissions. Now, all you need to do is and it's in the paper that I sent Debbie. If you go to a vet or you get any form of microwave receiver and run it over our body, if you're transmitting, it will pick it up.

So, if you get a reader like the vets have, they're very good those things, if you've got a friendly vet, just say, "Don't run it over the cat, run it over me and see what we get." Get the reader run over your body. If there's a transmitter in there and it's the right frequency, the reader will certainly pick it up quite loudly. Like a metal detector. You can use a metal detector, microwave detector, you can use a reader. Run it over the body, when it beeps, you'll know where it is. When you know where it is, what you've got to do is get the particular part of your body x-rayed. Under, you know local anesthetic.

Once you got it out. Then you've got a case you can win, but until you've actually got it in your hands. You won't have a chance; they will say you're mad. If you take it out and you put under a microscope, any school microscope and have a look at it. Then you've got a case because there is only one time in your life when someone's had that part, that access to your body.

You can narrow, your medical records can narrow it down and it is quite easy to pin point the person. Let's say one you have one in your shoulder, there can only be probably only one time in your life that part of your particular shoulder was operated on or treated. You may not get the actual individual, but you will get that actual time and place. But it can be done, they can be read, they can be found, they can be located and they can be taken out. I mean, just minor surgery, minor ops here, minor surgery, any local doctor will numb skin and just take it out. Once you've got it and then you've got your legal case.

Well, you've got 639 muscles, so they can affect any of those muscle groups; you've got all of those nerves running around those muscles. They can be near the endocrine glands that could affect the excretions that could make you hyperactive or go the other way and make you suicidal. You can actually affect somebody anyway you would like.

"FREQUENCIES"

Have you seen the list that I've got of all the different frequencies and what they do? Do you want a copy? I'll give you a copy. If I show you the list, its, I'll get it in a minute, before you leave I'll give you a copy of the list of all the different frequencies that are known and practiced and worked and you can see, in fact some people, when look at the list, well they make me do this and you can actually see the frequencies that you are being targeted with.

I have the only copy in the world, not the only piece of paper. It is the only list in the world. I've compiled from years and years of government research and then realized how secret it was, the first thing I did was put it on the Internet. It's on the Internet.

If you have the old fillings, the mercury or Amalgam fillings, the metal based fillings, they make transmitters. So, what you need is a tiny, tiny transmitter around the salivary glands, they transmit to the teeth and the teeth can react as big transmitters, especially if you've got metal in your mouth you see, and then it can be transmitted to the brain through your teeth.

"LEGAL CASE IN OREGON, USA"

I've got a legal case coming up in the United States, partly to do with this. You can't go straight in with what they are doing. You've got to come in by the back door. Now, we've got this highly publicized case. I'm one of the Scientific Witnesses and only a couple months ago I was in London with three (3) of our lawyers, this is the case going on in Oregon with the little girl who doesn't want to be microwave and she's taking on the industry and the industry has

have said, "Well, take us to court" and daddy is a lawyer and his best friend is a lawyer and she said find and we'll take you to court and she has. A few months ago in London, the industry's lawyer came over to interview me and another scientist, I think he's interviewed me for five (5) hours and the little girl was there and her two lawyers were there. It is what you call a deposition. He came over and asked questions, they've all gone back and now we're waiting for the court date. Once I can get into court, I can, you know I can blurt all of this out in court. But you know, until you can, there is not much you can do. I don't know, if it doesn't get to court, the world isn't going to know again.

At the moment people are too busy, too busy in their families, holding onto their jobs, the stress of life anywhere is so great at the moment, the people can't stop their lives to put everything in jeopardy to take on the most powerful industry in the planet. They can't do it. Even if they could, they probably wouldn't want to. No, it's down to people like you and me and a few others.

(Barrie Trower): To try to get the word out. We are getting there. Like I said, "It is going to be slow." As I say, "It took 30 to stop x-raying pregnant woman, and 20 years to get cholera recognized, and 30 years to try and get smoking after it was known to cause cancer." Nothing happens quickly.

(Barrie Trower): I know exactly what you are thinking, I know what you would answer, I have spoken to hundreds and hundreds and hundreds of people.

(Female TI 2): I have a sort of a question to you in comment that, there was a document it was called something, "Selected Bio-affects of some Non-Lethal Weapons" it was supposedly it became unclassified and in this document they talked about how that some of these technologies and weapons affected the elasticity of the skin.

"MICROWAVE RADIATION AND THE EFFECTS ON THE BODY"

Now, what can happen with microwave radiation which generates electric currents in the body, as the microwave goes in, the magnetic fields actually generates electric currents in the body. So what you can do is over load this feedback loop and once it is overloaded there is nothing else it can do but get all the electricity out. Hence a lot of people near transmitters or using phones that have epileptic fits. The only thing you can do is that they do have some sort of drug that can stimulate the feedback loop to neutralize the current or I don't know how they work, but I know you can do something to the feedback loop that stops it blurring all the electricity out.

(Barrie Trower): There has to be some kind of sort of ionic neutralized or generated something that neutralizes the charge in the body, the ionic charge. It would have to be something that produces neutralizes the ionic charges and it would have to do something like that because its oxygen or ions or hydrogen ions. You would have to generate some sort of ionic compound that would neutralize that particular discharge.

Laughter is addictive, if one person laughs the others laugh, like yawning everybody else yawns. It is possible, there are, your question is probably too advance. There something like 100,000 (One Hundred Thousands) protein structures that have different jobs in the body and out of those 100,000 (One Hundred Thousand) only about 600 (Six Hundred) are known. There is more unknown than known and you could be right. If it works then you need to write a research paper on it and if you can find something that works and write a research paper and get it published in one of our magazines and somebody like me would read it around the world and they would say, "well I can add to that." Cause I know the chemical. The problem we have today and this isn't an opt-out to try and not to answer your question. The problem that we have today, is that scientific knowledge now is so specialized there was a time when I was teaching science I could teach chemistry, and physics, and biology, and botany, and now scientists coming out of university will only probably specialized in one structure of the leaf they probably couldn't answer questions about the rest of the leaf or the tree or the bark or the insects. It is now so highly specialized, like in photosynthesis and so much there is so much knowledge now and there are something like 50,000,000 (Fifty Million) scientific research papers now published in everything.

Now if you're an expert, you can only be an expert in that tiny, tiny bit of a fraction of those 50,000,000 (Fifty Million) papers and this is the problem. I remember talking to a scientist who designed airplanes once and there was a

time I could design the whole airplane. He said, "No people with my qualifications may only get to design a nut and a bolt that holds a part of the engine together because it doesn't decay and it doesn't meteorologically do this or that or the other." He says, "We might only now do a nut and a bolt. We certainly couldn't do a wing. No scientist could possibly do a wing of an airplane."

(Barrie Trower): It is just knowledge and knowledge grows. When you go to a university and you do a degree you spend the first three years learning everything else that everybody else s' up to that point in time as some of you may know and then you spend the last year doing new research hasn't been done before. So, every single university student is doing a dissertation is something that hasn't been done before and then that's publish. That is where you degree comes from.
